

ENLIGHT Checklist

General Information

Author names:

Date:

Title of manuscript:

Below is the **ENLIGHT Checklist** for reporting ocular light exposures in human laboratory-based studies. We will strongly encourage that this checklist be used in conjunction with the **ENLIGHT Explanation & Elaboration (E&E) document**. This checklist is intended both to help authors, reviewers, and editors in evaluating the completeness of reporting in submitted studies, and for documentation of studies after publication. In the location column, please indicate the page, figure, or table number where the item or description can be found. If an item is not available, please select "**Not available**". If you consider an item not to be applicable in your specific study design after consulting the guidelines, please select "**Not applicable**". Items which do not have the option to select "Not applicable" were rated by experts as applicable for all studies, regardless of context. If you are unable to provide the information, please select "Not available".

The **ENLIGHT Checklist** (this document) and the **ENLIGHT E&E document** are released under the <u>CC-BY-NC-ND</u> <u>License</u>. For more information, please visit http://enlight-statement.org/.

A.1. Protocol-level characteristics								
	Location (page, figure, table number)	Not available	Not applicable					
Description of experimental setting								
Timeline of experiment (including timing and duration of light)								
Pre-laboratory sleep-wake/rest-activity behaviour								
Pre-laboratory light exposure								
Immediate prior light exposure (in laboratory)								
A.2. Measurement-level characteristics								
Measurement plane (e.g., horizontal or vertical)								
Measurement viewpoint and location								
Type, make and manufacturer of the measurement instrument								
Calibration status of the instrument								
A.3. Participant-level characteristics								
Ocular health and functioning								
Pupil size and/or dilation								
Relative time (e.g. to circadian phase or sleep)								

B. Light characteristics

B.1. Light source type(s). Please select all that are relevant.

Room illumination (overhead or other)	Emissive surfaces including displays (incl. light therapy devices)	Wearable emitting gl		Ganzfeld exposure	Other:	
Polychromatic light		Monochromatic or narrowband light				
				n (page, figure, le number)	Not available	Not applicable
Type, make and manufac	turer of the light source					
Use of wearable filtering a	apparatus (e.g., blue-blockii	ng glasses)				
B.2. Light level	characteristics					
Illuminance (lux) and/or lu	uminance (cd/m²)					
Spectral irradiance and/o	r radiance distribution					
α-opic irradiance and/or	radiance (including melano	pic)				
α-opic equivalent dayligh (EDI/EDL, including mela	nt illuminance and/or lumina nopic)	nce				
NOTE: Luminance and radiance	metrics (as opposed to illuminance	e and irradiance) are mainly	relevant for emissive s	surfaces.	
B.3. Colour ch	aracteristics					
Peak wavelength and ban	ndwidth					
Colour appearance quant	ities (any)					
Colour rendering metrics	(any)					
NOTE: Peak wavelength and bar	ndwidth are most relevant for mono	chromatic or nai	rowband ligh	ht sources.	•	
B.4. Temporal	and spatial characteris	tics				
Location of stimulus and v	viewing distance					
Temporal pattern (includir	ng flash frequency and wav	eform)				
Relative or absolute size	of the stimulus
